Introduction

SkillSwap is a platform that enables users to exchange skills and knowledge with each other. In this phase, we focused on creating a high-fidelity prototype, evaluating the system through testing, identifying limitations, and reflecting on the overall project outcomes.

Prototype

High-Fidelity Prototype

To demonstrate the system functionality, we developed a high-fidelity clickable prototype. The prototype includes the main screens of the system such as Login, Sign Up, Home, Skill Request, Messages, and User Profile. It allows users to visualize how the final system will operate.

Evaluation

Prototype Evaluation

The prototype was reviewed to ensure that the main system requirements were represented correctly. The screens were designed to demonstrate the user journey, including registration, skill browsing, skill requests, messaging, and profile management.

The prototype successfully illustrates the core concept of the SkillSwap platform and provides a clear visualization of the proposed system.

Challenges & Future Improvements

Challenges

- Simple and user-friendly interface design.
- Clear organization of system features.
- Accurate representation of requirements through the prototype.

Add a subheading

- Real-time notifications.
- Voice and video communication.
- AI-based skill recommendations.
- Integration with university systems.

Reflection & Conclusion

Reflection

This project provided practical experience in requirements analysis, system design, prototyping, and testing. It also improved our teamwork and problem-solving skills.

Conclusion

The SkillSwap prototype successfully demonstrated the main system features and provided a solid foundation for future development.
